

Software to Improve Healthcare Efficiency

PRODUCT BRIEF

Personal Health Record from Interbit Data and MyMedicalRecords

MEET THE TIMELY ACCESS REQUIREMENT FOR MEANINGFUL USE AND GENERATE REVENUE

Healthcare providers have always required the ability to store and retrieve patient information in a highly secure environment. Now federal Meaningful Use requirements mandate that by 2014 patients be given timely access to their own medical records.

To help you achieve this important step toward Meaningful Use, Interbit Data has entered into a partnership with MyMedicalRecords, Inc. (MMR) – a leading provider of Personal Health Records (PHR) – to introduce a new solution that allows you to make patient healthcare records available to patients securely over the Internet in a timely fashion.

Secure electronic availability of healthcare records to patients over the Internet not only helps you meet federal Meaningful Use requirements for timely access and qualify for government stimulus funds, it also allows you to run your enterprise more efficiently and to provide better patient service.

This one-of-a-kind solution also presents a potential revenue opportunity for hospitals and other healthcare facilities when patients upgrade from the free MMRPatientView patient portal to a paid subscription of the full-featured MyMedicalRecords PHR service. A portion of the MMR subscription fee of any patient enrolled in a MyMedicalRecords account is returned directly to your healthcare organization.

Now you can meet a criterion of federal compliance AND offer a valuable service to your patients while creating a revenue stream for your organization.

Interbit Data's Mission

Interbit Data helps healthcare organizations deliver better, more consistent patient care with secure, reliable and cost-effective software solutions that improve operational efficiency. Implemented in more than 600 healthcare facilities, Interbit Data solutions help organizations meet the challenging operational demands of the healthcare industry.

The Only Certified Report Distribution Product

Interbit Data's NetDelivery and Document Manager with Distribution Wizard solution for MEDITECH Magic and C/S 6.0 are the **ONLY** report distribution products to successfully achieve EHR Meaningful Use certification from the Office of the National Coordinator for Health Information Technology for ambulatory and inpatient practices.

Now when you add our Meaningful Use certified report distribution solution to your MEDITECH Meaningful Use certified HCIS solution, you can be confident that your total solution is fully qualified to receive ARRA stimulus funds.

PROVIDE SECURE, TIMELY ACCESS TO PERSONAL HEALTH RECORDS

This joint solution utilizes Interbit Data's NetDelivery with Document Manager application to assemble patient reports from your hospital's healthcare information system (HCIS), and then delivers them securely to the MMR PHR. MyMedicalRecords is a secure, on-line service that enables patients to maintain copies of their medical records from all their providers in one central location, and safely access them via the Internet anytime from anywhere. The patient can also designate third parties, such as a caregiver, to have access to their records. In addition, each account can cover up to nine additional family members at no additional cost to the subscriber.

Together, NetDelivery with Document Manager and MyMedicalRecords facilitate the process of aggregating patient information from multiple sources, and delivering the assembled files securely to patients over the web.

PRODUCT INFORMATION

- Runs as a service under Windows Server 2003 and Windows 2008
- Logs all activity to Windows Event Viewer
- Converts files from MEDITECH to PDF format

FEATURES AND BENEFITS

NetDelivery with Document Manager is tightly integrated with MyMedicalRecords to enable secure delivery of patient records from your organization's HCIS to a secure repository on the Internet. The solution:

- Gives patients and other designated individuals access to electronic medical records information by request quickly, easily and securely
- Ensures compliance with Meaningful Use requirements for timely access and secure electronic delivery of medical records and discharge instructions
- Provides anywhere, anytime access to records with a cloud-based PHR portal from MyMedicalRecords
- Creates a potential revenue stream for your organization by earning a portion of the subscription fee from your enrolled patients
- Distributes reports in PDF format to simplify the review and printing process for users
- Sends a new report notification link to up to three e-mail addresses, including the user's smartphone
- Ensures HIPAA-compliant report delivery via validated user connections and 128-bit SSL report encrypting prior to delivery via the Internet
- Increases the accuracy of where reports are delivered by extracting recipients, destinations and filenames from reports
- Improves security and efficiency by enabling information to be sent to the right person at the right time

Sending Data to a MyMedicalRecords Patient Portal Using NetDelivery
