

Software to Improve Healthcare Efficiency

# Document Manager

PRODUCT BRIEF

## Meaningful Use requires hospitals to assemble and deliver electronic patient records quickly and securely

Today, both Meaningful Use and healthcare standards demand the prompt availability and total security of electronic patient records. But assembling and managing comprehensive patient records from numerous departments and systems can be a time-consuming, inefficient and potentially insecure process.

With Document Manager from Interbit Data, you can quickly and easily assemble various records into a single encrypted electronic file and deliver it securely to anyone entitled to access.

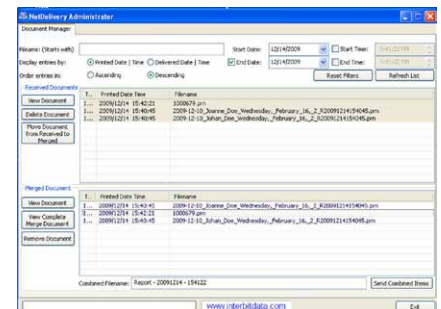

Document Manager operates via an easy-to-use viewer, giving you total control over document assembly, formatting and distribution. You can control how a document is assembled, even adding a cover page and table of contents for longer documents. The system also allows you to set up rules for automatic document assembly and routing so that time-consuming tasks like patient discharge instructions are a breeze.

### Meeting your Meaningful Use requirements

Meaningful Use requires hospitals to supply patients with an electronic version of their medical records in a timely manner upon the patients' request.

Demonstrating Meaningful Use of EMR/EHR solutions in your organization is a critical step in qualifying for your share of government stimulus money – but it is also a smart move that will lead to reduced errors, greater efficiency and improved patient care.

With Document Manager, reports and documents can be encrypted and stored on removable storage devices. Even though they are easily accessible from workstations when requested, the files remain secure on the server. Patients' medical records can also be uploaded to the [MyMedicalRecords.com](http://MyMedicalRecords.com) patient portal as part of the Document Manager product.

Document Manager Viewer simplifies document assembly and allows multiple delivery options.

NetDelivery for MEDITECH Magic and 6.0 along with Document Manager from Interbit Data is the **ONLY** report distribution product to achieve Modular EHR Meaningful Use certification from the ONC-ATCBs (Office of the National Coordinator for Health IT - Authorized Testing and Certification Bodies) for ambulatory and in-patient practices.

Now hospitals can add Interbit Data's certified report distribution solution to their MEDITECH Meaningful Use certified HCIS-compliant solution and be confident they are fully qualified to receive ARRA stimulus funds.

## SOLUTION BENEFITS

- Ensure compliance with Meaningful Use requirements for secure electronic delivery of medical records and discharge instructions
- Patient portal available in collaboration with [MyMedicalRecords.com](http://MyMedicalRecords.com)
- Conserve staff resources previously wasted on finding, collating and delivering separate documents
- Shorten the learning curve with our easy-to-use viewer that gives clear options for document assembly and delivery methods
- Save time and reduce errors with automatic selection and assembly of requested documents
- Simplify document delivery with multiple options including fax, e-mail, secure web delivery and removable storage
- Allow authenticated users to access, consolidate and deliver files from any workstation
- Eliminate the waste and security risks of printed documents
- Satisfy security requirements with document encryption and audit trails; all files remain on the server and behind your firewall

## ABOUT INTERBIT DATA, INC.

Founded in 1997 and named to the 2009, 2010 and 2011 Inc. 5000 list of America's fastest growing companies, Interbit Data helps healthcare organizations deliver better, more consistent patient care with secure, reliable and cost-effective software solutions that improve operational efficiency. The company's information distribution products deliver information securely over the Internet in multiple formats—such as fax, print, e-mail, encrypted file or HL7 message format—and integrate easily into physicians' practice EMRs. Interbit Data's business continuance products give healthcare providers continuous access to patient data in the event of a network or system outage. Interbit Data products are used by more than 650 MEDITECH® customers worldwide.

Meaningful Use requirements demand that patients be given medical records and discharge instructions electronically if requested. The encrypted .pdf format available through Document Manager allows you to e-mail records, give them to patients on a portable USB drive, or post them on MMR's secure patient portal.
