

Software to Improve Healthcare Efficiency

## NetDelivery Support for HL7® Physician Office Integration

Using electronic data distribution saves paper, reduces paper costs and eliminates manual handling of data, which can take hours, pose a risk to data security and patient privacy and increase inaccuracies. With NetDelivery, reports are delivered to physicians' secure hospital network folders in real-time. All they need to do is go to the secure portal connecting them to the hospital, find their network folder and click and drag their patient's file to their hard drive and their Practice Solutions EMR. Only one clerical person in the physician's office would need to logon each morning to retrieve all of the physician's patient reports and drag them to the EMR.

Cambridge Memorial Hospital  
Cambridge, ON*

## Speeding, Simplifying and Securing Data Distribution

NetDelivery gives us the ability to push data through the Internet on-demand and deliver it faster and more reliably. It's simple and straightforward to use, and because Interbit Data is familiar with MEDITECH, they offered instructions for setting up the software that made the implementation very easy.

*Kelly Wells  
Assistant Director of IT  
DCH Regional Medical Center*

Interbit Data solutions reduce excessive paper usage by offering an alternative to printing reports.

## NetSolutions

The NetSolutions family of web-enabled applications offers the quickest and most economical way for healthcare providers to leverage the Internet and securely access the information critical to successful patient care. Connect your doctors, staff and technical support to the data they need from MEDITECH or other Healthcare Information Systems using proven and intuitive HIPAA-compliant software. The NetSolutions product family consists of:

- **Secure report distribution**- NetDelivery, NetDelivery C/S, Distribution Wizard and the Integration Module
- **Network faxing** - NetFax, NetFax C/S and Desktop Fax Option
- **Business continuity**- NetSafe and MPrint Server

## Secure Report Distribution

Healthcare providers and organizations need help increasing efficiency while maintaining the security and privacy of electronic transmissions. The NetSolutions report distribution products securely deliver reports generated from your MEDITECH system to those who need the information. Your users get the information they need in the format that makes it easy for them to do their jobs, helping increase the efficiency of your organization.

**NetDelivery** enables hospitals to define (by user/location) whether to securely distribute reports via fax, encrypted print stream, encrypted file, encrypted email or by posting to a secure web site. Remote locations can have virtual printers via the Internet, which on demand, on schedule or in real-time, retrieve data from your system. NetDelivery validates connections and encrypts all data passing through the Internet using 128-bit encryption algorithms.

The **Distribution Wizard** option allows you to collate and direct reports to the proper recipients based on user-defined rules that use data extracted from the reports. It also enables you to apply logical "if/then" rules for decision-based delivery.

The **Integration Module** option takes reports generated by the MEDITECH HCIS and reformats them into HL7 messages to deliver clinical results directly to physicians and their practice management systems.

Both the Distribution Wizard and Integration Module are fully integrated with NetDelivery and the MEDITECH faxing routines and support both the Magic and Client/Server systems.

## Solution for Multiple Downtime Situations

We had heard from MEDITECH users that NetSafe was the product to use," said Cheryl Toomey, Clinical Informatics Specialist at the Milford Regional Medical Center. "Once we saw the demo, we realized that NetSafe was beneficial for more than medication administration and had other downtime uses as well.

## About Interbit Data, Inc.

Founded in 1997 and named to the 2009 Inc. 5000 list of America's fastest growing companies, Interbit Data offers secure, reliable and cost-effective software solutions that improve operational efficiency. The company's information distribution products deliver information securely over the Internet in multiple formats, such as fax, print, email, encrypted file or HL7 message format, and integrate easily into physicians' practice EMRs. Interbit Data's business continuance products give healthcare providers continuous access to patient data in the event of a network or system outage. Interbit Data products are used by more than 650 MEDITECH® customers worldwide.

## Business Continuance

As good as technology is today, hospitals need a way to accommodate network and system downtime to ensure continuous access to the vital patient information critical for quality patient care. Many healthcare providers have prepared for unforeseen disasters but few have implemented business continuance solutions that seamlessly integrate into their daily operations for when the network or system is unavailable.

**NetSafe** allows hospitals to automatically capture and preserve patient information generated from the healthcare information system at regular intervals and store it on local PCs as a backup strategy in the event of a network or system outage. Users can access this information stored as PDF files for lookup, review, and/or printing. This eliminates the need for continuous printing of patient reports and substantially reduces paper usage. Having up-to-date patient information whenever you need it ensures you can deliver quality patient care even when your systems or networks are unavailable.

**MPrint Server** simplifies file capture and printer sharing for your organization. Reports are automatically directed to PC hard drives by simply defining them as MEDITECH devices. You can capture different reports with different rules such as storing multiple generations of a report or over writing a report to a more current version.

## Network Faxing

The NetSolutions network faxing products are easy to use, cost-effective options for faxing information directly from the MEDITECH system to those who need the data.

- **NetFax** is an integrated replacement for dedicated fax appliances that runs on a Microsoft® Windows PC and is defined as a "Communications Director" printer for both MEDITECH Magic and Client/Server systems.
- **Desktop Fax Option**, an add-on product to NetFax and NetDelivery, allows enterprise-wide demand fax and inbound fax capabilities. Like other NetSolutions products, there are no limits for the number of users and/or ports, allowing the application to accommodate an entire facility.
