

Software to Improve Healthcare Efficiency

Speeding, Simplifying and Securing Data Distribution

NetDelivery gives us the ability to push data through the Internet on-demand and deliver it faster and more reliably," states Wells. "It's simple and straightforward to use, and because Interbit Data is familiar with MEDITECH, they offered instructions for setting up the software that made the implementation very easy.

Kelly Wells

*Assistant Director of IT
DCH Regional Medical Center*

Saving Staff Time and Reducing Paper Usage and Costs

Using electronic data distribution saves paper, reduces paper costs and eliminates manual handling of data, which can take hours, pose a risk to data security and patient privacy and increase inaccuracies.

Brad Smith

*Clinical Applications Consultant
Cambridge Memorial Hospital*

Interbit Data solutions reduce excessive paper usage by offering an alternative to printing reports

NetDelivery

Secure, Accurate Delivery of Patient Information

Healthcare providers require the ability to retrieve patient information and reports in a highly secure environment. The **NetDelivery** report distribution solutions enable hospitals and providers to simply and securely send patient information generated from your healthcare information system. Our solutions enable you to provide reports in the most beneficial format to the end users, including fax, print stream, encrypted file or email.

Document distribution with faxing

NetDelivery enables organizations to simply and securely distribute reports and/or data generated from the MEDITECH® system to those who need the information in the most beneficial format to the end users, including fax, print stream, encrypted file or email. NetDelivery is integrated with the MEDITECH faxing functions but allows you to define by user and/or location whether to send the data as a fax, a file, an email, or a print out. Remote locations can have virtual printers via the Internet, which on demand, on schedule, or in real-time, retrieve data from your system. All connections are validated and all data passing through the Internet is encrypted using 128-bit encryption algorithms.

Features and Benefits

NetDelivery is integrated with MEDITECH faxing routines to enable secure distribution of reports from your organization's information systems via fax or encrypted data stream over the Internet.

- Remote printers are "attached" to the Internet to enable flexible retrieval options - on demand, on schedule, or in real-time.
- Reports can be distributed in PRN, TIF, TXT, or PDF formats, to simplify the review and printing process for users.
- A report link can be sent via email to eliminate need for client software, ensure full audit trail and guarantee secure delivery using encryption.
- User connections to the reports are validated and reports are encrypted prior to delivery via the Internet using 128-bit SSL encryption to ensure HIPAA-compliant report delivery.
- Recipients, destinations, and filenames can be extracted from reports to increase the accuracy of where reports are delivered. Security and efficiency is improved by enabling information to be sent to the right person at the right time.

Implementation is a Breeze

We bought the entire suite of products 1 ½ years ago. We're using NetDelivery pretty heavily, especially in the management of inbound faxes for CWS. Implementation for all products has been a breeze. I'm not sure what else I can say other than I've been pleased in all respects with Interbit Data and their products.

*G. Fred Shepard
Systems Administrator

Product Information

- Fax routines are fully supported by MEDITECH.
- Supports class 1, class 2 and class 2.0 modems. The MEDITECH faxing component does not support Brooktrout modems.
- Runs as a service under Windows 7, Windows Vista, Windows XP, Windows Server 2003, or Windows 2000.
- Uses 128-bit SSL encryption (requires server to have Microsoft IIS installed).
- Logs all activity to Windows Event Viewer.
- Supports TCP/IP protocol. Product can be placed behind the firewall or on a DMZ.
- Converts files from MEDITECH to PRN (no conversion), TIF, TXT or PDF format.
- Full integration with MEDITECH MIS and Windows-based programs via (virtual) LPR printers.
- Client supports all Windows operating systems clients with Internet Explorer 4.0 or above

Optional Products

NetDelivery can be extended with the following options:

- The **Distribution Wizard** option allows you to collate and direct reports to the proper recipients based on user-defined rules that use data extracted from the reports. It also enables you to apply logical "if/then" rules for decision-based delivery.
- The **Integration Module** option takes reports generated by the MEDITECH HCIS and reformats them into HL7 messages to deliver clinical results directly to physicians and their practice management systems.
- The **Desktop Fax** option allows unlimited faxing from PC-based applications. Also allows inbound fax routing via DID, CSID and manual forwarding.

Both the Distribution Wizard and Integration Module are fully integrated with NetDelivery and the MEDITECH faxing routines and support both Magic and Client/Server systems.

About Interbit Data, Inc.

Founded in 1997 and named to the 2009 Inc. 5000 list of America's fastest growing companies, Interbit Data helps healthcare organizations deliver better, more consistent patient care with secure, reliable and cost-effective software solutions that improve operational efficiency. The company's information distribution products deliver information securely over the Internet in multiple formats, such as fax, print, email, encrypted file or HL7 message format, and integrate easily into physicians' practice EMRs. Interbit Data's business continuance products give healthcare providers continuous access to patient data in the event of a network or system outage. Interbit Data products are used by more than 650 MEDITECH® customers worldwide.
