

Software to Improve Healthcare Efficiency

### Speeding, Simplifying and Securing Data Distribution

NetDelivery gives us the ability to push data through the Internet on-demand and deliver it faster and more reliably," states Wells. "It's simple and straightforward to use, and because Interbit Data is familiar with MEDITECH, they offered instructions for setting up the software that made the implementation very easy.

*Kelly Wells*

DCH Regional Medical Center*

### Saving Staff Time and Reducing Paper Usage and Costs

Using electronic data distribution saves paper, reduces paper costs and eliminates manual handling of data, which can take hours, pose a risk to data security and patient privacy and increase inaccuracies.

*Brad Smith*

*Clinical Applications Consultant  
Cambridge Memorial Hospital*

Interbit Data solutions reduce excessive paper usage by offering an alternative to printing reports

## NetDelivery C/S

### Secure, Accurate Delivery of Patient Information

Healthcare providers require the ability to retrieve patient information and reports in a highly secure environment. The **NetDelivery C/S** report distribution solution enables hospitals and providers to simply and securely send patient information generated from your MEDITECH® C/S or MEDITECH® 6.0 system in the most beneficial report format to the end users, including fax, print stream, encrypted file or email.

### Flexible Report Delivery

**NetDelivery C/S** combines the capabilities of NetDelivery, the Distribution Wizard and Desktop Fax into one simple, flexible product designed to work specifically with MEDITECH C/S and MEDITECH 6.0 systems. This product:

- Securely distributes reports and/or data from your organization's MEDITECH system via fax, encrypted print stream, encrypted file or email. Using a sophisticated user and security concept, the Report Dispenser allows you to define by user and/or location whether to send the data as a fax, a file, an email, or a print out.
- Collates and directs reports generated by the MEDITECH system to the proper recipients based on user-defined rules using data extracted from the reports. Automatic update routine feeds recipient information from MEDITECH MIS (single or multiple).
- Allows unlimited faxing from PC-based applications (C/S demand Fax). Support for inbound fax routing using Direct Dial Numbers (DDI, MSN), Caller Identification (CSID) or Line Routing to route incoming faxes directly to a department or user.

### Features and Benefits

**NetDelivery C/S** offers many features that ensure efficiency and security:

- Documents can be delivered via fax, email, and/or secure remote print to increase satisfaction, streamline delivery to both local and remote users, and to reduce the demand for fax lines.
- Reports printed in batches can be collated based on user-defined rules to save your staff time from having to determine which reports go to which person. User aliases can be defined to ensure reports are correctly sent to the recipient. One copy of the report can be sent to multiple recipients to improve the efficiency of the system.

## Implementation is a Breeze

We bought the entire suite of products 1 ½ years ago. We're using NetDelivery pretty heavily, especially in the management of inbound faxes for CWS. Implementation for all products has been a breeze. I'm not sure what else I can say other than I've been pleased in all respects with Interbit Data and their products.

Recipients, destinations, and filenames can be extracted from reports to increase the accuracy of where reports are delivered. Security and efficiency is improved by enabling information to be sent to the right person at the right time.

- User connections to the reports are validated and reports are encrypted prior to delivery via the Internet using 128-bit SSL encryption to ensure HIPAA-compliant report delivery.

## Product Information

- Server runs on Windows 7, Windows Vista, Windows 2000/2003, Windows XP or Windows 2008. Minimal hardware resources required. Client supports Windows 95/98/ME, Windows 7, Windows Vista, Windows 2000, Windows XP, and Citrix.
- Integrates with Windows Domain Security.
- Converts files from MEDITECH to PRN (no conversion), TIF or PDF format.
- Delivers via fax, (encrypted) print stream, e-mail, Web delivery, FTP, HTTP, HTTPS, network printer, LPR printer, placement into local network folder(s), collation for local printing, and other options available.
- Supports unlimited number of user-defined reports and/or rules.
- Includes improved management of users and outbound queues to enhance communications.
- Suppresses or redirects reports to patient rather than provider location.
- Creates audit trail through comprehensive logging.
- Monitors and corrects delivery errors through report queues.
- Fax capability supports:
  - Optional printout or e-mail of incoming fax messages and send reports.
  - Automatic archiving.
  - User-defined cover pages and overlays.
  - Application controlled definition of fax parameters (subject, recipient, priority, etc.) using data fields.

Integration Module option uses HL7® to deliver clinical results directly to physicians and their practice management systems.

## About Interbit Data, Inc.

Founded in 1997 and named to the 2009 Inc. 5000 list of America's fastest growing companies, Interbit Data helps healthcare organizations deliver better, more consistent patient care with secure, reliable and cost-effective software solutions that improve operational efficiency. The company's information distribution products deliver information securely over the Internet in multiple formats, such as fax, print, email, encrypted file or HL7 message format, and integrate easily into physicians' practice EMRs. Interbit Data's business continuance products give healthcare providers continuous access to patient data in the event of a network or system outage. Interbit Data products are used by more than 650 MEDITECH® customers worldwide.
