Comprehensive Inbound & Outbound Enterprise Fax

Healthcare professionals need access to information stored in their healthcare information system. These critical reports can be conveniently delivered via fax, a tried-and-true method. To simplify the set-up and use of faxing reports to doctors, nurses and other healthcare professionals, Interbit Data's network faxing products give you cost-effective options.

EXPANDS FAXING CAPABILITIES TO THE ENTIRE ENTERPRISE

Desktop Fax, an option for the NetDelivery and NetDelivery FaxOnly products, is used to integrate fax and e-mail functionality into different environments without the need for extensive modifications. It supports all important network protocols (e.g., LPD/LPR) for connection to the fax server, making sending a fax message as easy as printing a document. Data fields can be used to specify the parameters (recipient, subject, priority, etc.) from within an application.

PRODUCT INFORMATION

- Runs as a service under Windows Server – 2003/2003R2, 2008/2008R2, 2012/2012R2
- Includes fax from any – Windows application
