# IntegrationModule (HL7)

Transform Data for Interoperability

### SECURE, ACCURATE DELIVERY OF PATIENT INFORMATION

Hospitals require the ability to rapidly and securely distribute large volumes of information to users inside and outside of their network. The NetDelivery Integration Module simplifies the conversion of data into HL7, JSON, or other open standards to simplify exchange with other systems. Your users get the information they need in the format that makes it easy for them to do their jobs.

### **FEATURES AND BENEFITS**

- Data formats can be specified by recipient, allowing definition of multiple EMR and application requirements and simplifying on-going support
- Electronic communications ensure data security
- User defined and managed, with updates supported by Interbit Data

#### PRODUCT INFORMATION

- Fully integrated with report distribution and rules engine
- User-defined formats can be modified on demand
- · Unlimited number of feeds and/or rules
- · Comprehensive audit trail

#### **Securing Healthcare Connections**

"The NetDelivery Integration Module has allowed Good Samaritan Hospital to provide an HL7 feed into their physician's EMR systems. This simple solution has eliminated any need for custom interface programming from MEDITECH and utilizes standard MEDITECH Laboratory reports. In return, we have eliminated the need to send hardcopy Laboratory reports daily to the offices, eliminated delay of receiving results via normal printing/faxing process and now provide immediate access to valuable Lab data from Good Samaritan Hospital to the physicians. This solution also allows the physicians to view and compare similar results within their own EMR systems for their patients."

Michael Wynters, Healthcare Informatics Associates Senior Healthcare Consultant Good Samaritan Hospital, Puyallup, Washington

"With NetDelivery, reports are delivered to physicians' secure hospital network folders in real-time. All they need to do is go to the secure portal connecting them to the hospital, find their network folder and click and drag their patient's file to their hard drive and their Practice Solutions EMR. Only one clerical person in the physician's office would need to logon each morning to retrieve all of the physician's patient reports and drag them to the EMR."

Brad Smith, Clinical Applications Consultant Cambridge Memorial Hospital, Ontario

#### **About Interbit Data**

Interbit Data provides software automation solutions that ensure clinicians and hospital staff always have easy, secure and reliable access to patient information, so they can get back to their patients and Stay In Touch. Our products integrate with any HCIS platform to distribute reports that helps care teams stay informed. We are the pioneer and best practice leader in downtime business continuity providing reliable access to patient information at the point-of-care during downtimes, as well as during more challenging cyber crises.

Using our software automation solutions, hospitals can be more efficient, streamline workflows and improve overall patient care and safety. Our 750+ worldwide customers are a testament to the value of our offerings.
