

Software to Improve
Healthcare Efficiency

NetFax

PRODUCT BRIEF

Integrated Faxing Solution

Healthcare professionals need access to information stored in their healthcare information system. The required reports can be conveniently delivered via fax, a tried and true method. To simplify the setup and usability of faxing reports to doctors, nurses and other healthcare professionals, Interbit Data's network faxing products give you cost-effective options.

NetFax is designed to replace dedicated fax appliances. It seamlessly integrates into your existing Healthcare Information System (HCIS) to enable you to direct faxes to users defined within your HCIS. Expansion is as simple as adding multiple modems. Logs are maintained on the server and communicated directly to an audit trail. Errors can be printed directly to a console printer for follow-up. NetFax can be upgraded to NetDelivery.

FEATURES AND BENEFITS

- Approved and supported by MEDITECH for guaranteed future compatibility
- Defined as a printer, it seamlessly integrates with your HCIS for directing faxes to defined users
- Runs under Windows Server 2012, 2008 and 2003 for easy installation and set-up
- Easy to add modems for flexible expansion when you need it
- Maintains logs on the server for directing errors to a system administrator and to an audit trail

PRODUCT INFORMATION

- Runs as a service under Windows Server 2012/2012 R2, Windows Server 2008/2008 R2, and Windows Server 2003/2003 R2.
- Minimum requirements are a current processor with a minimum of 2GB of free memory
- Hardware Modems: Minimum: Dual Core Processor with 2 GB of RAM
- NetFolP: Minimum: Dual Core Processor with 2 GB of RAM; Recommend: Quad Core Processor with 4 GB of RAM
- Supports Mainpine, PERLE and MultiTech ISI modems, and (optional) virtual modems
- Full integration with MEDITECH MIS and Telecom routines
- Supports full PCL5e emulation
- Logs all activity to the Windows Event Viewer and internal databases

NetFax

"We send probably hundreds of faxes a day from our lab and radiology department and we're able to send them five times faster than we could with our old FAXBOX and FAXBOX 2. It seemed that every other day the FAXBOX would give us connectivity problems that would require restarting the process and spooling the jobs all over again. But NetFax EM4 works extremely well by comparison. Installation is simple, there's no learning curve to speak of, and it was half the price of FAXBOX."
