

INTERBIT

Interbit is a healthcare IT focused company, with a proud 25-year history of developing innovative and pragmatic solutions for the healthcare community. We boast over 500 clients worldwide, 99%+ retention rates, and enjoy a great reputation. Our success can be attributed to paying a close eye on healthcare IT challenges and thoughtfully responding with cost effective and practical solutions.

Our next generation platform, Beacon, continues this legacy, with an enterprise solution designed to simplify communications and provide care continuity. The platform delivers value whether your system is running normally, or experiencing a downtime or Cyberattack.

EXPLORE THE BEACON PLATFORM

Always On, Never Down.

Secure healthcare communications and clinical continuity solutions so you can focus on what matters most: your patients.

With so much patient data from your EHR and other disparate sources that needs to move between multidisciplinary teams, referring physicians, and payers, accessing critical healthcare information and managing communication workflows is complicated.

Factor in planned or unplanned downtimes and cyberattacks and your organization is left vulnerable to patient safety and compliance risks while also exposing you to gaps in charge capture and potential revenue loss.

Critical information distributed, safe care delivered.

Improve health outcomes and mitigate financial and patient safety risks with our vendor-agnostic platform that ingests, manages, and distributes critical patient information inside and outside your organization.

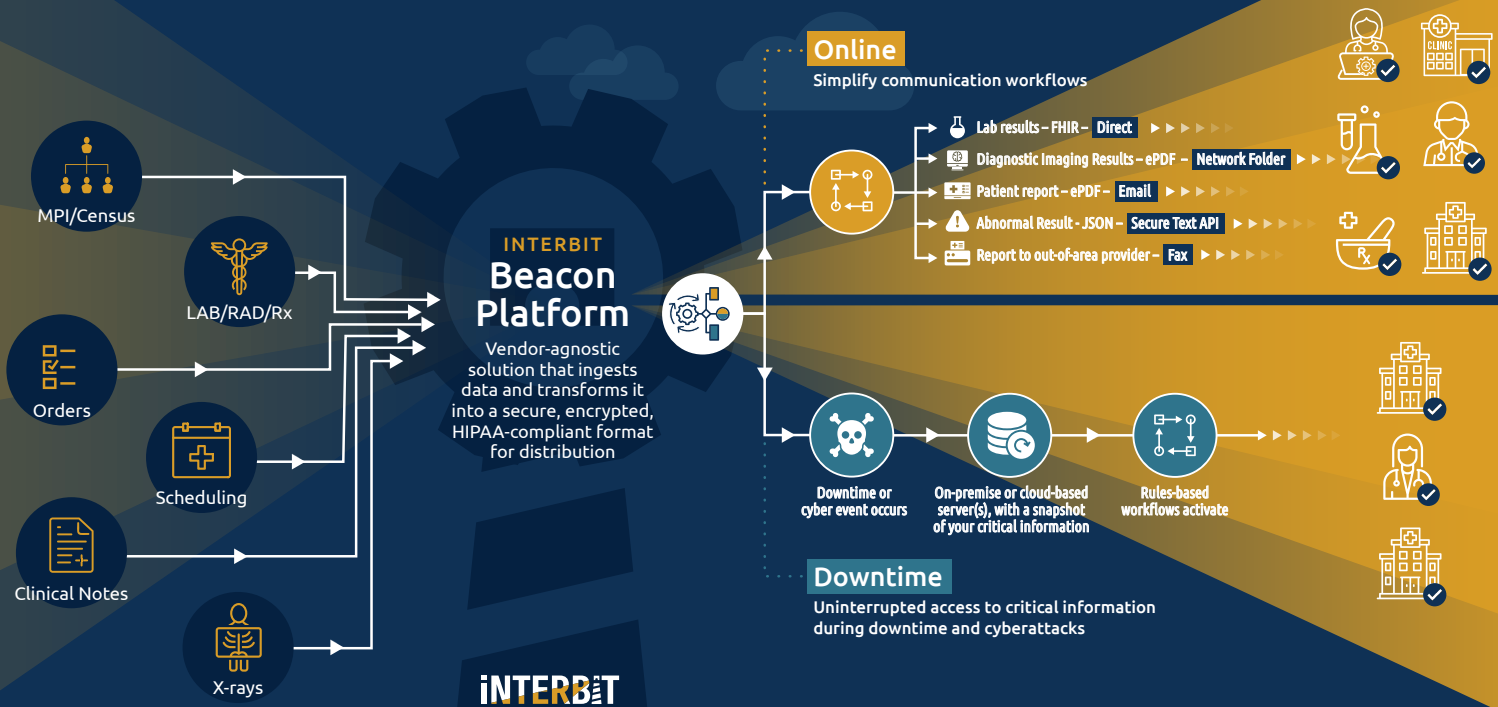

Get patient data in the right format, where and when you need it, even if your systems go down.

- Automates distribution of patient information with customizable and flexible workflows.
- Provides 24/7 access to critical patient information during downtimes and cyber events with on-premise or cloud-based server(s).
- Compatible with all HCIS and EHR systems: MEDITECH, Epic, Allscripts, and Cerner.
- Integrates with any source, format, or communication method.
- Routes encrypted, HIPAA-compliant messages.
- Tailors information delivery based on individual user preferences.
- Subscription-based pricing options for your entire site, industry-leading client support, and concierge-level service.
